# 1 Introduction

## 1.1 Objective

The objective of this Software Requirements Specification (SRS) document is to provide a comprehensive and detailed description of the requirements for the AIMS (An Internet Media Store) software system. This document is intended to serve as a clear and unambiguous guide for the software development team, project managers, and stakeholders involved in the creation and implementation of AIMS.

This SRS aims to:

- Define the functionalities, features, and constraints of the AIMS system
- Establish a common understanding between stakeholders and the development team
- Serve as a basis for software design, development, testing, and validation
- Act as a reference for future maintenance and enhancements of the system

The intended audience for this SRS includes:

- Software developers and engineers
- Project managers
- Quality assurance testers
- System administrators
- Business stakeholders and decision-makers

## 1.2 Scope

This SRS covers the requirements for the AIMS (An Internet Media Store) software, a desktop e-commerce application designed for the sale and management of physical media products.

The AIMS software will:

- Provide a platform for product managers to add, view, edit, and delete media products
- Allow administrators to manage user accounts and roles
- Enable customers to browse, search, and purchase media products
- Facilitate order processing, including cart management and payment integration
- Support various types of media products, including books, CDs, LP records, and DVDs
- Implement inventory management and order fulfillment features
- Incorporate a rush order delivery option for eligible products and locations

The AIMS software will not:

- Handle digital media products or streaming services
- Provide a mobile application interface (desktop only)
- Manage physical store operations or in-person sales

The application of AIMS is to create an efficient and user-friendly e-commerce platform for physical media products. The key benefits, objectives, and goals of the system include:

- Provide a 24/7 operational e-commerce platform for media products
- Support simultaneous use by up to 1,000 customers without significant performance degradation
- Ensure high availability with the ability to operate continuously for 300 hours without failure
- Implement robust product management features for efficient inventory control
- Offer a seamless shopping experience for customers, including product browsing, cart management, and order placement
- Integrate secure payment processing through VNPay
- Support various delivery options, including rush order delivery for eligible products and locations
- Maintain system security and data integrity through user role management and access controls

### 1.3 Glossary

*<Listing and explaining the terms appearing in the software's profession and this documents. Any assumption of the reader's prior knowledge or experience on the subject is ill advised>*

<i>No</i>	<i>Term</i>	<i>Explanation</i>	<i>Example</i>	<i>Note</i>
1	VAT	Value Added Tax, a consumption tax placed on a product whenever value is added at each stage of the supply chain, from production to the point of sale.	0% VAT added to product prices	In Vietnam, the standard VAT rate is 10%
2.	Rush Order	An expedited delivery option available for eligible products	2-hour delivery	Incurs an additional fee

<i>No</i>	<i>Term</i>	<i>Explanation</i>	<i>Example</i>	<i>Note</i>
		and locations, typically within a specific timeframe.	window in inner-city Hanoi	
3.	MTBF	Mean Time Between Failures, a measure of how reliable a hardware product or component is.	1000 hours MTBF	Higher values indicate better reliability
4.	PCI DSS	Payment Card Industry Data Security Standard, a set of security standards designed to ensure that all companies that accept, process, store or transmit credit card information maintain a secure environment.	Encryption of cardholder data	Mandatory for e-commerce systems handling credit card payments
5.	GDPR	General Data Protection Regulation, a regulation in EU law on data protection and privacy for all individual citizens of the European Union and the European Economic Area.	User consent for data processing	Applies to all companies processing the personal data of EU residents, regardless of the company's location
6.	API	Application Programming Interface, a set of protocols and tools for building software applications.	RESTful API for inventory integration	Allows AIMS to communicate with external systems

## 1.4 References

## 2 Overall Description

### 2.1 Survey

This section provides a high-level overview of the AIMS software, its context, and the various actors involved in its operation. The purpose is to offer a general understanding of the system before delving into specific requirement

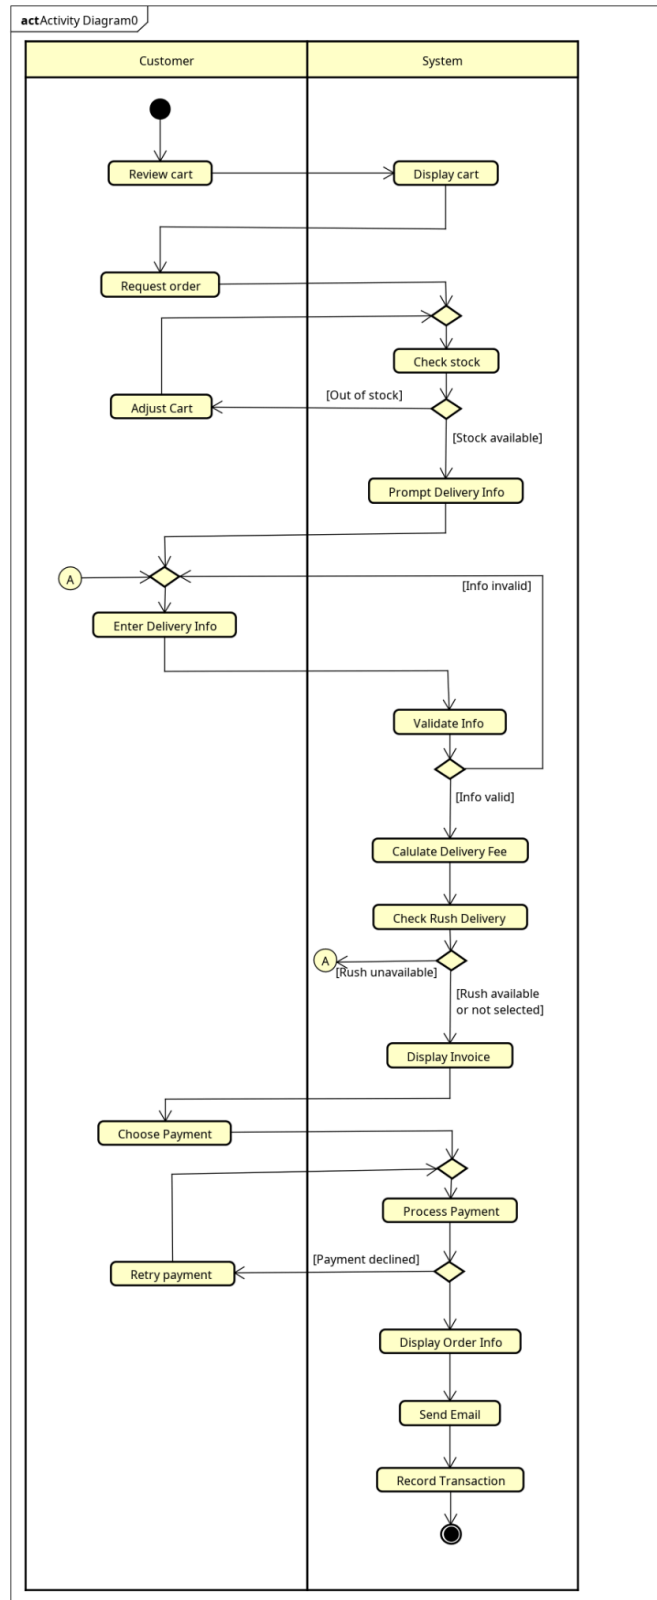

Actors and their roles in the AIMS system:

- Product manager
  - Adds new products to the system
  - Edits existing product information
  - Deletes products (up to 10 at once)
  - Updates product prices
  - Reviews and approves/rejects pending orders
- Administrator
  - Creates new user accounts
  - Views and updates user information
  - Deletes user accounts
  - Resets user passwords
  - Blocks or unblocks users
  - Sets or changes user roles
- Customer
  - Browses and searches for products
  - Views product details
  - Adds products to the shopping cart
  - Modifies cart contents (change quantities, remove items)
  - Provides delivery information
  - Selects payment method
  - Places orders
  - Opts for rush order delivery (when eligible)
  - Views order information
  - Cancels orders (before approval)
- VNPay Payment Gateway
  - Processes credit card payments
  - Handles refunds for cancelled orders

## **2.2 Overall requirements**

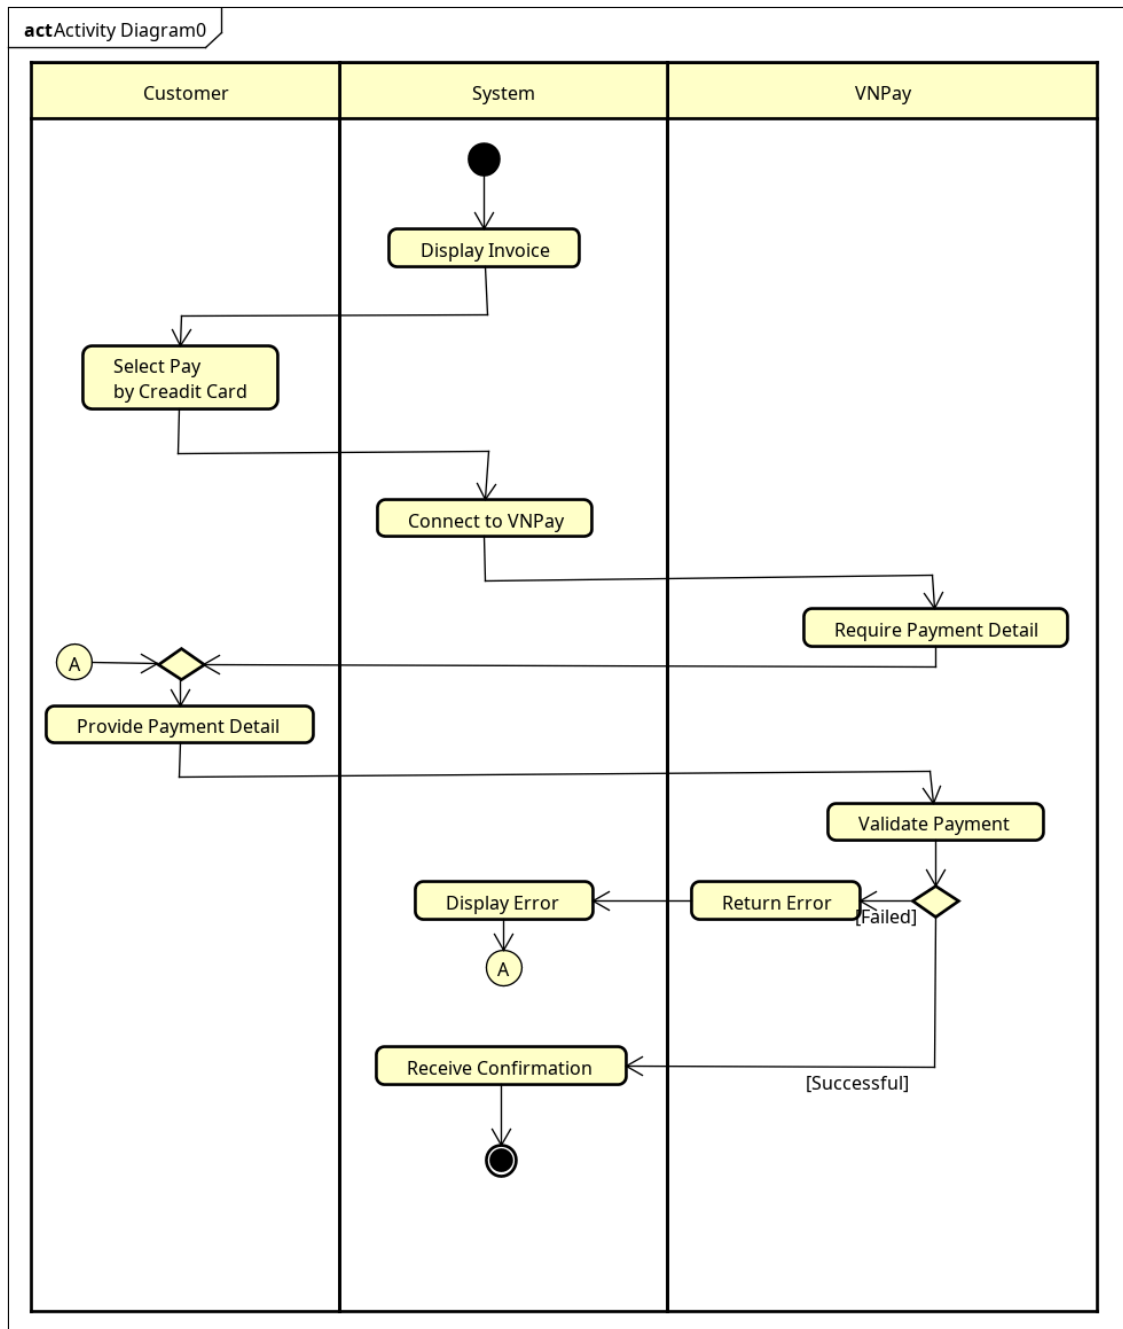

## **2.3 Business process**

The business process will be depicted using activity diagrams (continued). This document will focus solely on the activity diagrams related to the order placement use cases.

Activity Diagram – Place order (Include place rush order)

Activity Diagram – Pay order

## 3 Detailed Requirements

### 3.1 Product Management

#### 3.1.1 Product Addition

3.1.1.1 The system shall allow product managers to add new products to the inventory.

3.1.1.2 The system shall require the following information for all media products:

- Title
- Category
- Value (excluding VAT)
- Current price (excluding VAT)
- Barcode
- Product description
- Quantity
- Warehouse entry date
- Product dimensions
- Weight

3.1.1.3 The system shall require additional information based on product type:

3.1.1.3.1 For books:

- Authors
- Cover type (paperback or hardcover)
- Publisher
- Publication date
- Number of pages (optional)
- Language (optional)
- Genre (optional) 3.1.1.3.2 For CDs and LP records:
- Artists
- Record label
- Tracklist
- Genre
- Release date (optional) 3.1.1.3.3 For DVDs:
- Disc type (Blu-ray, HD-DVD)
- Director
- Runtime
- Studio

- Language
- Subtitles
- Release date (optional)
- Genre (optional)

3.1.1.4 The system shall allow product managers to add only one product at a time.

3.1.1.5 The system shall not limit the number of products that can be added in a day.

### 3.1.2 Product Editing

3.1.2.1 The system shall allow product managers to edit existing product information.

3.1.2.2 The system shall allow product managers to edit only one product at a time.

3.1.2.3 The system shall limit product managers to updating no more than 30 products per day.

3.1.2.4 The system shall allow product managers to update the price of a product up to twice a day.

3.1.2.5 The system shall ensure that the updated price is between 30% and 150% of the product value.

### 3.1.3 Product Deletion

3.1.3.1 The system shall allow product managers to delete products from the inventory.

3.1.3.2 The system shall allow product managers to delete up to 10 products at once.

3.1.3.3 The system shall limit product managers to deleting no more than 30 products per day.

### 3.1.4 Product Viewing

3.1.4.1 The system shall allow product managers to view all product information.

### 3.1.5 Operation Logging

3.1.5.1 The system shall maintain a history of all product addition, editing, and deletion operations.

3.1.5.2 The system shall notify the product manager of any invalid operations.

## 3.2 User Management

### 3.2.1 User Creation

3.2.1.1 The system shall allow administrators to create new user accounts.

### 3.2.2 User Information Management

3.2.2.1 The system shall allow administrators to view user information.

3.2.2.2 The system shall allow administrators to update user information.

3.2.2.3 The system shall allow administrators to delete user accounts.

3.2.2.4 The system shall allow administrators to reset user passwords.

### 3.2.3 User Access Control

3.2.3.1 The system shall allow administrators to block user accounts.

3.2.3.2 The system shall allow administrators to unblock user accounts.

3.2.3.3 The system shall allow administrators to set or change user roles.

3.2.3.4 The system shall support multiple roles for each user, including administrator and product manager.

### 3.2.4 User Authentication

3.2.4.1 The system shall require administrators and product managers to log in to access role-specific features.

3.2.4.2 The system shall allow users to change their passwords.

### 3.2.5 Notification

3.2.5.1 The system shall automatically send email notifications to users for all administrative actions affecting their accounts.

## 3.3 Customer Interface

### 3.3.1 Product Browsing

3.3.1.1 The system shall display a list of 20 random products on each page when the software starts.

3.3.1.2 The system shall allow customers to search for products using product attributes.

3.3.1.3 The system shall display 20 related products on each search result page.

3.3.1.4 The system shall allow customers to sort products by price.

### 3.3.2 Product Details

3.3.2.1 The system shall allow customers to view detailed information for each product.

### 3.3.3 Shopping Cart

3.3.3.1 The system shall allow customers to add products to their cart from both the product list and product detail screens.

3.3.3.2 The system shall allow customers to specify the quantity of each product added to the cart.

3.3.3.3 The system shall display the following information when viewing the cart:

- Total price of products (excluding VAT)
- List of products with name, quantity, and price
- Notification of insufficient inventory, if applicable
- Quantity lacking for each product with insufficient inventory

3.3.3.4 The system shall allow customers to remove products from the cart.

3.3.3.5 The system shall allow customers to change the quantity of products in the cart.

3.3.3.6 The system shall maintain only one cart per software session.

3.3.3.7 The system shall empty the cart after a successful order payment.

## 3.4 Order Processing

### 3.4.1 Order Placement

3.4.1.1 The system shall not require customers to log in to place an order.

3.4.1.2 The system shall allow customers to review their cart before placing an order.

3.4.1.3 The system shall verify inventory availability each time a customer requests to place an order.

3.4.1.4 The system shall prompt customers to update their cart if inventory is insufficient, displaying available quantities for each affected product.

### 3.4.2 Delivery Information

3.4.2.1 The system shall require customers to provide the following delivery information:

- Recipient name
- Email
- Phone number
- Province/city for delivery
- Delivery address

3.4.2.2 The system shall validate all required delivery information fields.

3.4.2.3 The system shall calculate and display the delivery fee each time the delivery address is entered or updated.

### 3.4.3 Rush Order Delivery

3.4.3.1 The system shall offer a rush order delivery option for eligible addresses within the inner city of Hanoi.

3.4.3.2 The system shall verify product eligibility for rush order delivery.

3.4.3.3 The system shall prompt customers to update delivery information or method if rush order delivery is not available for the selected address or products.

3.4.3.4 The system shall request additional information for rush order delivery:

- Delivery time (within a 2-hour timeframe)
- Delivery instructions

3.4.3.5 The system shall calculate and display separate delivery fees for rush order and regular delivery items.

3.4.3.6 The system shall charge an additional 10,000 VND per rush order delivery item.

### 3.4.4 Payment Processing

3.4.4.1 The system shall display and temporarily save the following invoice information:

- List of products in the cart with quantity and prices
- Total product price (excluding VAT)
- Total product price (including 10% VAT)
- Delivery fee
- Total amount to be paid

3.4.4.2 The system shall allow customers to choose a payment method.

3.4.4.3 The system shall integrate with VNPay for credit card payment processing.

3.4.4.4 The system shall record payment transaction information for successful orders.

### 3.4.5 Order Confirmation

3.4.5.1 The system shall display the following information after a successful payment:

- Customer name
- Phone number
- Shipping address
- Province
- Total amount paid
- Transaction ID
- Transaction content
- Transaction date and time

3.4.5.2 The system shall set the order status to "pending processing" after successful payment.

3.4.5.3 The system shall send an email to the customer with invoice and payment transaction information.

### 3.4.6 Order Management

3.4.6.1 The system shall allow customers to view order information using links provided in the confirmation email.

3.4.6.2 The system shall allow customers to cancel orders before they are approved.

3.4.6.3 The system shall process full refunds through VNPay for cancelled orders.

3.4.6.4 The system shall allow product managers to view 30 pending orders per page.

3.4.6.5 The system shall allow product managers to approve or reject orders.

3.4.6.6 The system shall automatically reject orders with insufficient inventory.

## 3.5 System Performance and Reliability

3.5.1 The system shall support up to 1,000 simultaneous customers without significant performance reduction.

3.5.2 The system shall operate continuously for 300 hours without failure.

3.5.3 The system shall resume normal operation within 1 hour after an incident.

3.5.4 The system shall respond within 2 seconds under normal conditions.

3.5.5 The system shall respond within 5 seconds during peak hours.

### 3.6 Shipping Fee Calculation

3.6.1 The system shall not apply VAT to shipping fees.

3.6.2 The system shall provide free shipping for orders with a total value exceeding 100,000 VND, up to a maximum of 25,000 VND per order.

3.6.3 The system shall exclude rush order delivery items from the free shipping calculation.

3.6.4 The system shall calculate shipping fees based on the weight of the heaviest item.

3.6.5 The system shall charge 22,000 VND for the first 3kg for deliveries within inner-city Hanoi or Ho Chi Minh City.

3.6.6 The system shall charge 30,000 VND for the first 0.5kg for deliveries elsewhere in Vietnam. 3.6.7 The system shall charge an additional 2,500 VND for every subsequent 0.5kg.

## 3.1 Use case 1

### Use Case “Place order”

#### 1. Use case code

UC001

#### 2. Brief Description

This use case describes the interaction between the customer and the AIMS software when the customer wishes to place an order.

### **3. Actors**

Customer – Initiates the order and provides necessary details for delivery

### **4. Preconditions**

- The customer must have selected products in the cart.
- The software must have access to the inventory system.

### **5. Basic Flow of Events**

1. The customer reviews the cart and selects the products they want to purchase.
2. The system displays the products in the cart with their quantities, individual prices (excluding VAT), and the total price.
3. The customer requests to place an order.
4. The system checks if any product is out of stock or if the available quantity is insufficient.
5. The system prompts the customer to provide delivery information, including recipient name, email, phone number, province/city, and delivery address.
6. The customer enters delivery information.
7. The system validates the delivery information.
8. The system calculates and displays the delivery fee.
9. The system checks if the delivery address supports the service and calculates a separate delivery fee for eligible products when rush order delivery is selected.
10. The customer chooses to pay for the order.
11. The system displays and temporarily saves the invoice, which includes:
  - List of products- Prices, VAT, and delivery fee
  - Total amount to be paid
12. The customer chooses the payment method.
13. The customer provides all necessary information and places the order.
14. The system connect to VNPay to process the payment
15. The system displays general information of the order and transaction details.
16. The system sends the invoice and payment transaction information to the customer's email.
17. The system records the payment transaction information and the successfully paid order.

## 6. Alternative flows

**Table N-Alternative flows of events for UC Place order**

No	Location	Condition	Action	Resume location
1.	At step 4	If any product is out of stock	1. The system displays a message to the customer to adjust the cart. 2. The customer updates the cart and retries placing the order.	Step 4
2.	At step 7	If delivery information is invalid	1. The system prompts the customer to correct the information. 2. The customer provides the correct information and continues with the order.	Step 7
3.	At step 9	If rush delivery is unavailable	1. The system informs the customer that rush order delivery is unavailable for some or all products. 2. The customer updates the delivery information or product selection. 3. The system recalculates the delivery fee and updates the invoice.	Step 9
4.	At step 14	If payment is declined by VNPay	1. The system displays a message to the customer with the option to retry or update payment details. 2. The customer retries the payment or updates the payment information.	Step 14

## 7. Input data

**Table A-Input data of delivery information**

No	Data fields	Description	Mandatory	Valid condition	Example
1.	Recipient Name	Name of the person receiving order	Yes	Non-empty	Viet Anh
2.	Email	Customer's email address	Yes	Valid email format	vietanh@gmail.com
3.	Phone Number	Contact number for delivery	Yes	Valid phone number	0123456789

4	Province/City	Delivery location	Yes	Selected from predefined list	Hanoi
5	Delivery Address	Street address for delivery	Yes	Non empty	123 Main St
6	Credit Card Details	Payment information	Yes	Valid card information as per VNPay requirements	N/A

## 8. Output data

**Table B-Output data of general information of order and transaction info**

No	Data fields	Description	Display format	Example
1	Customer Name	Name of the customer placing the order	Text	Viet Anh
2	Phone Number	Customer's contact number	Phone number format	0123456789
3	Province	Customer's province or city for delivery	Text	Hanoi
4	Address	Customer's full delivery address	Text	123 Main St
5	Total Amount (Cash)	Total payment amount including VAT and delivery	Currency format	9,900,000 VND
6	Transaction ID	Unique ID for the payment transaction	Alphanumeric	TX123456789
7	Transaction Content	Description of the transaction or order purpose	Text	"Order payment for electronics"

## 9. Post conditions

- The order is successfully placed and payment is processed.
- The customer receives an invoice and order confirmation via email.
- The system records the transaction and the order is queued for fulfillment.
- Update inventory

### 3.2 Use case 2

#### Use Case “Pay order”

##### 1. Use case code

UC002

##### 2. Brief Description

This use case outlines the interaction between the customer, AIMS software, and VNPay when a customer opts to pay for an order via credit card.

##### 3. Actors

- Customer: Initiates the payment by providing necessary details.
- VNPay: Manages the payment processing through credit cards.

##### 4. Preconditions

- The customer has already placed an order and received an invoice.
- The VNPay gateway is available for credit card processing.

##### 5. Basic Flow of Events

1. The system displays the invoice and temporarily saves it.
2. The customer selects the credit card payment option.
3. The system connects to VNPay for processing the payment.
4. The customer provides the required payment details as prompted by VNPay
5. VNPay validates the payment information and processes the transaction.
6. Upon successful payment, the system receives a confirmation from VNPay.
7. The system returns to the "Place Order" use case.

##### 6. Alternative flows

Table N-Alternative flows of events for UC Place order

No	Location	Condition	Action	Resume location
3.	At step 5	If the credit card information is invalid or the payment fails	1. VNPay returns an error message. 2. The software displays an error and prompts the customer to re-enter payment details or choose a different card.	Step 4

##### 7. Input data

**Table A-Input data of payment information**

No	Data fields	Description	Mandatory	Valid condition	Example
2.	Credit Card Number	Customer's credit card number	Yes	Valid credit card format	0123 4567 8910 1112
2	Expiry Date	Expiration date of the credit card	Yes	Valid future date	"12/29"
3	CVV	Card Verification Value (security code)	Yes	3-4 digit number	"123"
4	Cardholder Name	Name of the credit card holder	Yes	Not empty	VU VIET ANH

**8.Output data****Table B-Output data of invoice**

No	Data fields	Description	Display format	Example
1	Cart Details	List of selected products and quantities	Table format	See Table 4
2	Subtotal (before VAT)	Total price before VAT	Currency, comma-separated	"9,900,000"
3	Delivery Fee	Cost of delivery	Currency, comma-separated	"100,000 VND"
4	Total Payment Amount	Total price (including VAT and delivery)	Currency, comma-separated	"Total amount: 10,000,000 VND"
5	Delivery info			User input in UC "Place order"

**Table C-Output data of cart details**

No	Data fields	Description	Display format	Example
1	Product Name	Name of the product in the cart	Text	"Phone A"

2	Quantity	Number of units of the product ordered	Numeric	"2"
3	Unit Price	Price per unit of the product	Currency	"10,000,000 VND"

### **9.Post conditions**

- The payment is successfully processed, and the order status is updated to "Paid".
- The invoice and payment details are stored in the system.
- A confirmation message is displayed to the customer, and a receipt may be sent via email.

## **4 Supplementary specification**

### **4.1 Functionality**

- The system must support multiple languages, including Vietnamese and English.
- The system must be capable of generating periodic reports on sales, inventory, and customer purchasing trends.
- The system must have the ability to automatically backup data daily.
- The system must be able to integrate with external accounting and inventory management systems through APIs.

### **4.2 Usability**

- The user interface must adhere to intuitive and user-friendly design principles.
- The system must provide online help and tooltips for complex functions.
- Training time for new employees to use the system should not exceed 4 hours.
- The system must support a dark mode to reduce eye strain for users.

### **4.3 Reliability**

- The system must maintain at least 99.9% uptime in a year.
- The Mean Time Between Failures (MTBF) must be at least 1000 hours.
- The system must be capable of automatic recovery after a failure within 5 minutes.
- The error rate must not exceed 0.1 errors per 1000 lines of code.

### **4.4 Performance**

- The system must handle at least 100 concurrent transactions without performance degradation.
- Response time for search queries must be under 1 second for 95% of cases.
- The system must be capable of handling at least 1 million products in the catalog without affecting performance.
- Page load time must not exceed 3 seconds for 90% of pages.

### **4.5 Supportability**

- The system must be designed with a modular architecture for easy maintenance and upgrades.
- The system must provide detailed logging for all activities to support debugging and troubleshooting.
- The system must support software updates without requiring downtime.

- Technical documentation and source code must be managed using a version control system.

#### **4.6 Other requirements**

- Security: The system must comply with PCI DSS standards for handling payment information.
- Privacy: The system must comply with GDPR regulations for protecting users' personal data.
- Scalability: The system must be scalable to support a 200% increase in traffic within 6 months without major architectural changes.
- Compatibility: The system must operate on popular web browsers (Chrome, Firefox, Safari, Edge) and major desktop operating systems (Windows, macOS, Linux).
- Legal Compliance: The system must comply with Vietnamese e-commerce regulations.
